

Template **Bigbadabom** for **Reaper**

Sorry, but bad english language

1 - You will need these files.

You must have inevitably these files :

- Bigbadabom (my freeware),
- the template Bigbadabom for Reaper... (I'm using the bêta 3 version of Reaper)

<http://www.pompougnac-daniel.com/04pages/02plugins/02vstis.htm>

and if you want (you can use your own samples and effects)

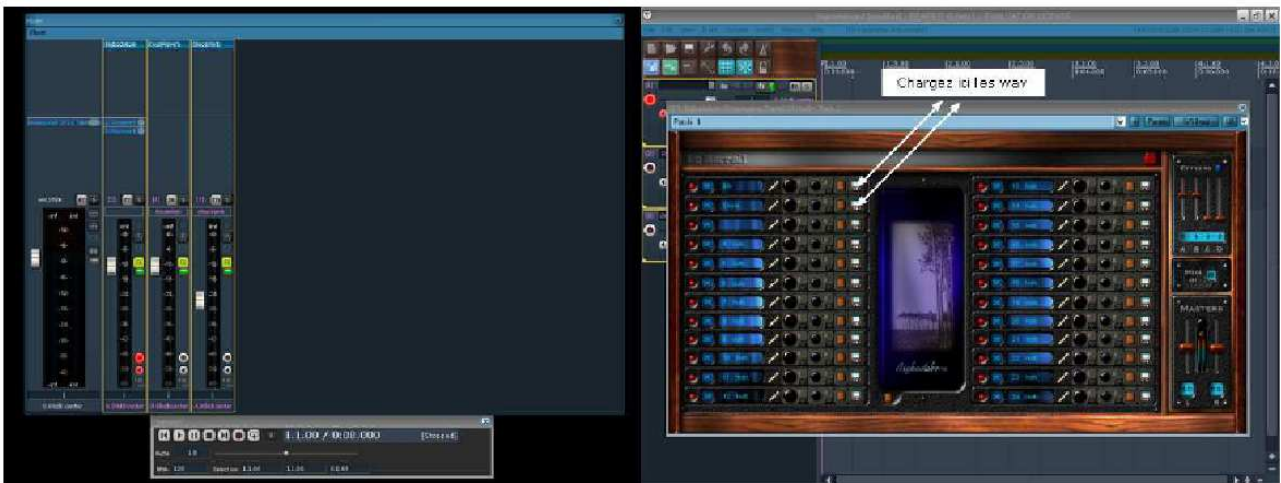

- Roomreverb (freeware) from Buzz
<http://www.x-buz.com/Products.html>
bottom of the page, « old vst »

- Glaceverb (freeware) from Da Sample
<http://www.dasample.com/index.php?show=glaeverb>
to « get it now »

- 2 waves
<http://www.pompougnac-daniel.com/04pages/02plugins/02vstis.htm>

2 - Installation

- Install *Bigbadabom* in your vst directory for *Reaper*.
- Install *Roomreverb* et *Glaeverb*.
- Then, using *Reaper*, « *Insert* », puis « *track from template* ».
- Install the drum waves > *Note : the template is ready with 2 waves installed in "c:_sons", on my computer, but if you have an error message (Bigbadabom has not found the waves), load the waves from your own directory (floppy logo).*

If any trouble, my mail > sitenm@aliceadsl.fr (change the "to").

Now, to learn and understand , look on the 6/10 out windows vst of Bigbadabom. And look on your inserts of sends (docker mixer, or float mixer)

To adjust the vst effects from Bigbadabom, click on the small wood button (every track has a wood button)
Roomreverb is on theBD and Glaeverb on the Snare.

Daniel
